

management's discussion and analysis

Management's Discussion and Analysis

Set out below is a review of the activities, results of operations and financial condition of Uranium One Inc. ("Uranium One") and its subsidiaries (collectively, the "Corporation") for the three and six months ended June 30, 2011, together with certain trends and factors that are expected to impact the rest of its 2011 financial year. Information herein is presented as of August 8, 2011 and should be read in conjunction with the interim consolidated financial statements of the Corporation for the three and six months ended June 30, 2011 and the notes thereto (referred to herein as the "consolidated financial statements"). The Corporation's consolidated financial statements and the financial data set out below have been prepared in accordance with International Financial Reporting Standards ("IFRS") or ("GAAP"). All amounts are in US dollars and tabular amounts are in millions, except where otherwise indicated. Canadian dollars are referred to herein as C\$. Australian dollars are referred to herein as A\$. The functional currency of Uranium One is the Canadian dollar.

References herein to "Q2 2010" and "Q2 2011" refer to the three months ended June 30, 2010 and June 30, 2011, respectively. All references herein to pounds are pounds of U₃O₈.

The common shares of Uranium One are listed on the Toronto and Johannesburg stock exchanges ("TSX" and "JSE", respectively). Uranium One's convertible unsecured subordinated debentures due December 31, 2011 and March 13, 2015 are also listed on the TSX.

Additional information about the Corporation and its business and operations can be found in its continuous disclosure documents. These documents, including the consolidated financial statements and the Corporation's annual information form, are filed with Canadian securities regulatory authorities and are available under the Corporation's profile at www.sedar.com.

This Management's Discussion and Analysis includes certain forward-looking statements. Please refer to "Forward-Looking Statements and Other Information".

HIGHLIGHTS

Operational

- Total attributable production during Q2 2011 was 2.4 million pounds, 33% higher than total attributable production of 1.8 million pounds during Q2 2010.
- The average total cash cost per pound sold was \$15 during Q2 2011, similar to the average cash cost per pound sold during Q2 2010.

Financial

- Attributable sales volumes during Q2 2011 were 2.0 million pounds, 33% higher than 1.5 million pounds sold during Q2 2010.
- Revenue was \$112.9 million in Q2 2011, 71% higher than \$66.0 million in Q2 2010. The average realized sales price during Q2 2011 was \$58 per pound compared to \$43 per pound in Q2 2010. The average spot price in Q2 2011 was \$56 per pound.
- Earnings from mine operations were \$61.7 million during Q2 2011, a 151% increase from earnings from mine operations of \$24.6 million in Q2 2010 due to increased sales volumes, an increase in the realized sales price and similar operating expenses.
- Net earnings increased by 450% during Q2 2011 to \$29.7 million, or \$0.03 per share compared to net earnings of \$5.4 million or \$0.01 per share during Q2 2010.
- Adjusted net earnings increased by 252% during Q2 2011 to \$27.1 million, or \$0.03 per share compared to adjusted net earnings of \$7.7 million or \$0.01 per share in Q2 2010.

Corporate

- On June 7, 2011, Uranium One announced that its 51% shareholder, ARMZ had completed the acquisition of Mantra Resources Ltd and that Uranium One became the operator of Mantra's Mkuju River Project in Tanzania pursuant to agreements entered into with ARMZ in connection with the closing.

OUTLOOK

- The serious incident at Fukushima will have near-term impact on uranium demand due to loss of capacity, program delays and extended outages due to inspections and upgrades; however, broader growth rates for nuclear power remain robust on the strength of the emerging markets of China, India, Russia and the Middle East. The Corporation believes that market conditions will continue to be favourable for lower cost, diversified producers like Uranium One.
- The total attributable production guidance remains at 10.5 million pounds for 2011 and 12.5 million pounds in 2012.
- The guidance for average cash cost per pound sold in 2011 remains at \$18 per pound.
- The Corporation expects attributable sales to be approximately 9.5 million pounds in 2011 and 12.0 million pounds in 2012.
- Excluding optional quantities under off-take agreements negotiated with ARMZ and the JUMI consortium, the Corporation currently has contracts for the sale of an aggregate of 21 million attributable pounds to customers, including 5 million pounds which will be sold at an average fixed price of \$67 per pound (subject to escalation) and 11 million pounds which has been contracted with weighted average floor prices of approximately \$47 per pound. The remainder of contracted attributable sales are not subject to floors and such sales are related to the market price of U₃O₈ at the time of delivery.
- The Corporation reduced its attributable capital expenditure estimate for 2011 to \$215 million from \$234 million. Capital expenditure includes \$71 million for wellfield development, \$21 million for resource definition drilling and \$123 million for plant and equipment. The reduction was due to the deferral of the Moore Ranch project offset partially by the expansion of the Willow Creek satellite facility and increased wellfield development.
- In 2011, general and administrative expenses, excluding non-cash items, are expected to be approximately \$37 million, restructuring and other non-recurring costs are expected to be \$7 million, and exploration expenses are expected to be \$7 million.

KEY STATISTICS

TOTAL ATTRIBUTABLE PRODUCTION	Q2 2011	Q1 2011	Q4 2010	Q3 2010	Q2 2010
Attributable commercial production (lbs)					
Akdala	480,100	407,500	453,200	448,000	489,200
South Inkai	620,700	669,800	782,700	770,300	769,700
Karatau	568,800	633,000	769,500	473,300	521,100
Akbastau ⁽¹⁾	325,000	366,900	16,700	-	-
Zarechnoye ⁽¹⁾	246,300	231,000	16,300	-	-
Subtotal	2,240,900	2,308,200	2,038,400	1,691,600	1,780,000
Attributable production during commissioning (lbs)					
Kharasan	78,700	71,100	68,400	55,100	43,600
Willow Creek Project	42,800	16,500	-	-	-
	121,500	87,600	68,400	55,100	43,600
Total attributable production	2,362,400	2,395,800	2,106,800	1,746,700	1,823,600

Note:

⁽¹⁾ Akbastau and Zarechnoye were acquired on December 27, 2010. Production for Q4 2010 therefore represents the period from acquisition to December 31, 2010

FINANCIAL

	Q2 2011	Q2 2010	YTD 2011	YTD 2010

Adjusted net earnings / (loss) (\$ millions) ⁽²⁾	27.1	7.7	41.8	(2.8)
Adjusted net earnings / (loss) per share – basic and diluted (\$ per share) ⁽²⁾	0.03	0.01	0.04	(0.00)

Notes:

⁽¹⁾ Attributable production and sales are from assets owned and in commercial production during the period (For Q2 2011: Akdala, South Inkai, Karatau, Akbastau and Zarechnoye; for Q2 2010: Akdala, South Inkai and Karatau only).

⁽²⁾ The Corporation has included non-GAAP performance measures: average realized sales price per pound, cash cost per pound sold, adjusted net earnings and adjusted net earnings per share. In the uranium mining industry, these are common performance measures but do not have any standardized meaning, and are non-GAAP measures. The Corporation believes that, in addition to conventional measures prepared in accordance with GAAP, the Corporation and certain investors use this information to evaluate the Corporation's performance and ability to generate cash flow. The additional information provided herein should not be considered in isolation or as a substitute for measures of performance prepared in accordance with GAAP. See "Non-GAAP Measures".

OVERVIEW

Uranium One is a Canadian corporation engaged through subsidiaries and joint ventures in the mining and production of uranium, and in the acquisition, exploration and development of properties for the production of uranium in Kazakhstan, the United States, Australia and Canada.

Through the Betpak Dala joint venture, Uranium One owns a 70% interest in the Akdala and South Inkai Uranium Mines in Kazakhstan. The Corporation holds a 50% interest in the Karatau joint venture, which owns the Karatau uranium mine in Kazakhstan, a 50% interest in the Akbastau joint venture, which owns the Akbastau uranium mine in Kazakhstan, a 49.67% interest in the Zarechnoye joint venture, which owns the Zarechnoye uranium mine in Kazakhstan and a 30% interest in the Kyzylkum joint venture, which owns the Kharasan Project in Kazakhstan. In the United States, the Corporation owns projects in the Powder River and Great Divide Basins in Wyoming. The Corporation owns a 51% interest in the Honeymoon Uranium Project in Australia. The Corporation owns, either directly or through joint ventures, a large portfolio of uranium exploration properties in the western United States, South Australia and Canada. The Corporation owns a 19% interest in the SKZ-U joint venture, which is constructing a sulphuric acid plant in Kazakhstan.

Since June 7, 2011, the Corporation is also the operator of the Mkuju River Project in Tanzania.

The following are the Corporation's principal mineral properties and operations (discussed in more detail below):

Operating mines

Entity	Mine	Location	Status	Ownership
Betpak Dala LLP	Akdala Uranium Mine	Kazakhstan	Producing	70% J.V. interest
Betpak Dala LLP	South Inkai Uranium Mine	Kazakhstan	Producing	70% J.V. interest
Karatau LLP	Karatau Uranium Mine	Kazakhstan	Producing	50% J.V. interest
Akbastau JSC	Akbastau Uranium Mine	Kazakhstan	Producing	50% J.V. interest
Zarechnoye JSC	Zarechnoye Uranium Mine	Kazakhstan	Producing	49.67% J.V. interest

Advanced development projects

Entity	Project	Location	Status	Ownership
Kyzylkum LLP	Kharasan Uranium Project	Kazakhstan	Commissioning ⁽¹⁾	30% J.V. interest
Uranium One Americas, Inc.	Willow Creek Project	USA	Commissioning ⁽²⁾	100% interest

The Corporation is also developing the following mineral properties:

Entity	Project	Location	Status	Ownership
Uranium One Americas, Inc.	Powder River Basin, Wyoming (Moore Ranch, Ludeman, Allemand-Ross, and Barge)	USA	Development	100% interest
Uranium One Americas, Inc.	Great Divide Basin, Wyoming (JAB and Antelope)	USA	Development	100% interest
Uranium One Australia (Proprietary) Ltd.	Honeymoon Uranium Project	Australia	Development	51% J.V. interest

Notes:

- (1) The Kharasan Uranium Project has commenced production but is in the commissioning stage. Commissioning will be completed when a pre-defined operating level, based on the design of the plant, is maintained and the Kazakhstan Government has issued an operating license.
- (2) Commissioning at the Willow Creek Project commenced on December 20, 2010 with operation of the initial well field at Christensen Ranch. Commissioning will be completed when a pre-defined operating level, based on the design of the plant, is maintained.

REVIEW OF OPERATIONS

AKDALA URANIUM MINE

Akdala is an operating acid in situ recovery ("ISR") uranium mine located in the Suzak region of South Kazakhstan, owned indirectly as to 70% by the Corporation through the Betpak Dala joint venture, a Kazakhstan registered limited liability partnership ("Betpak Dala"). The other 30% interest is owned by JSC NAC Kazatomprom ("Kazatomprom"), a Kazakhstan state-owned company responsible for the mining and exporting of uranium in Kazakhstan.

Pursuant to the terms of its subsoil use contract, the permitted production rate at the Akdala Mine is 2,600,000 pounds (1,000 tonnes uranium ("U")) per year.

Production: Akdala produced 685,800 pounds (264 tonnes U) during Q2 2011, of which 480,100 pounds (185 tonnes U) is attributable to the Corporation.

Operations: The following is a summary of the operational statistics (100%) for Akdala over the last four quarters:

	Total wells completed (including production wells)	Average no. of production wells in operation	Average flow rate (m³/hour)	Concentration in solution (mg U/l)	Production (lbs)
Q3 2010	65	210	1,691	67	640,000
Q4 2010	65	209	1,677	65	647,500
Q1 2011	56	209	1,763	64	582,100
Q2 2011	86	220	1,885	65	685,800

A total of 86 wells were installed during Q2 2011. The program for 2011 provides for the installation of 247 wells to achieve the production target for the year.

Two production blocks were prepared for acidification during the quarter and are scheduled to be acidified in Q3 2011. The average flow rates, concentration in solution and production for Q2 2011 is in line with the plan for the year.

Akdala contracted an engineering company in Kazakhstan to design a satellite plant to facilitate treatment of solutions from production blocks located approximately 15 kilometres to the east of the current central processing facilities in an area known as Letniy. The approval of detailed design of the satellite plant was received during Q2 2010. Construction of the satellite plant is scheduled for 2011. A construction contractor has been selected and started mobilization to the site. Key equipment for the satellite plant has been ordered. Production from new well fields in the Letniy area is expected to commence during 2012.

Capital expenditure incurred up to June 30, 2011 was \$2.6 million. Capital expenditure incurred by Betpak Dala at Akdala in 2011 is expected to be approximately \$35 million on a 100% basis, of which \$28 million is planned to be spent on the construction of satellite plant and fixed asset purchases, with the balance expected to be spent on well-field development and resource definition drilling.

AKDALA URANIUM MINE - continued

Financial information: The following table shows the attributable production, sales and production cost trends for Akdala over the prior eight quarters:

(All figures are the Corporation's attributable share)	3 months ended							
	Jun 30, 2011	Mar 31, 2011	Dec 31, 2010	Sep 30, 2010	Jun 30, 2010	Mar 31, 2010	Dec 31, 2009 ⁽¹⁾	Sep 30, 2009 ⁽¹⁾
Production in lbs	480,100	407,500	453,200	448,000	489,200	489,900	531,100	464,200
Sales in lbs	258,200	73,400	870,800	214,000	611,700	212,500	710,400	259,000
Inventory in lbs	1,173,800	956,000	626,300	1,047,700	808,000	936,000	666,600	849,300
Revenues (\$'millions)	15.8	4.5	47.9	11.3	26.0	8.8	32.8	12.9
Operating expenses (\$'millions)	3.7	0.9	10.9	2.6	7.3	2.8	8.6	3.0
Operating expenses (\$/lb sold)	14	13	13	12	12	13	12	12
Depreciation (\$'millions)	2.7	0.8	8.9	2.3	6.0	2.0	7.2	2.9
Depreciation (\$/lb sold)	11	11	10	11	10	10	10	11

Note:

⁽¹⁾ Information for periods prior to January 1, 2010, the date of the Corporation's transition to IFRS, has been prepared in accordance with Canadian generally accepted accounting principles then applicable and has not been restated to comply with IFRS.

Uranium revenues are recorded upon delivery of product to utilities and intermediaries and do not occur evenly throughout the year. Timing of deliveries is usually at the contracted discretion of customers within a quarter or similar time period. Annual sales of product from a mine, which is normally achieved from opening inventory plus a percentage of forecast production for the year, does not always occur evenly throughout the year and can vary significantly from quarter to quarter as illustrated in the table above.

Changes in revenues, net earnings / loss and cash flow are therefore affected primarily by fluctuations in contracted deliveries of product from quarter to quarter, as well as by changes in the price of uranium.

The cash cost of production for Q2 2011 at \$14 per pound sold is in line with the Corporation's guidance of \$14 per pound sold.

SOUTH INKAI URANIUM MINE

South Inkai is an operating ISR uranium mine located in the Suzak region of South Kazakhstan, owned indirectly as to 70% by the Corporation through the Betpak Dala joint venture. The other 30% interest is held by Kazatomprom.

The design capacity of the South Inkai mine is 5,200,000 pounds (2,000 tonnes U) per year. It is expected that the annualized rate of production will reach this level in 2011.

Production: Production from South Inkai was 886,700 pounds (341 tonnes U) in Q2 2011, of which 620,700 pounds (239 tonnes U) is attributable to the Corporation.

Operations: The following is a summary of the operational statistics (100%) for South Inkai over the last four quarters:

	Total wells completed (including production wells)	Average no. of production wells in operation	Average flow rate (m ³ /hour)	Concentration in solution (mg U/l)	Production (lbs)
Q3 2010	80	255	2,339	83	1,100,400
Q4 2010	59	280	2,568	73	1,118,100
Q1 2011	137	294	2,784	67	957,000
Q2 2011	156	309	2,787	57	886,700

A total of 156 wells were installed during Q2 2011. The program for 2011 provides for the installation of 472 wells to achieve the production target for the year; however it is now considered that additional wells might be installed due to lower-than-expected head grade in production solutions.

Three production blocks were acidified and were placed into production during the quarter. The new blocks achieved lower than expected concentration in solution, decreasing the average concentration. The average flow rate is being increased by the drilling of additional wells, and additional ion-exchange columns are being installed, which will increase the capacity to process the increased flow from the additional wellfields. These measures should counteract the decrease in the concentration in solution.

Capital expenditure incurred up to June 30, 2011 was \$13 million. Capital expenditure incurred by Betpak Dala at South Inkai in 2011 is expected to be approximately \$49 million on a 100% basis, of which \$17 million is related to well-field development, \$2 million is related to resource definition drilling and \$30 million is related to construction activities and fixed asset purchases.

Financial information: The following table shows the attributable production, sales and production cost trends for South Inkai over the prior eight quarters:

(All figures are the Corporation's attributable share)	3 months ended							
	Jun 30, 2011	Mar 31, 2011	Dec 31, 2010	Sep 30, 2010	Jun 30, 2010	Mar 31, 2010	Dec 31, 2009 ⁽¹⁾	Sep 30, 2009 ⁽¹⁾
Production in lbs	620,700	669,800	782,700	770,300	769,700	771,700	547,000	343,000
Sales in lbs	726,800	924,100	965,300	436,400	645,800	420,100	535,700	164,100
Inventory in lbs	1,138,100	1,245,400	1,500,200	1,684,900	1,360,200	1,230,100	903,900	897,700
Revenues (\$'millions)	43.0	60.6	50.8	20.6	28.6	21.2	25.7	8.4
Operating expenses (\$'millions)	12.0	15.3	15.1	8.0	13.2	9.6	11.2	3.3
Operating expenses (\$/lb sold)	17	17	16	18	20	23	21	20
Depreciation (\$'millions)	8.1	9.9	10.9	5.4	7.5	5.7	8.8	2.7
Depreciation (\$/lb sold)	11	11	11	12	12	14	16	17

Note:

⁽¹⁾ Information for periods prior to January 1, 2010, the date of the Corporation's transition to IFRS, has been prepared in accordance with Canadian generally accepted accounting principles then applicable and has not been restated to comply with IFRS.

The cash cost of production for Q2 2011 at \$17 per pound sold is in line with the Corporation's expectation and the annual cash cost per pound sold is expected to be in line with the guidance of \$19 per pound sold for the year.

KARATAU URANIUM MINE

Karatau is an operating ISR uranium mine located in the Chu Sary Su basin in the Suzak region, Shymkent Oblast, owned indirectly as to 50% by the Corporation through the Karatau joint venture. The other 50% interest is held by Kazatomprom.

The design capacity of the Karatau mine is 5,200,000 pounds (2,000 tonnes U) per year. It is expected that the annualized rate of production will reach this level in 2011.

Production: Production from Karatau was 1,137,500 pounds (438 tonnes U) in Q2 2011, of which 568,800 pounds (219 tonnes U) is attributable to the Corporation.

Operations: The following is a summary of the operational statistics (100%) for Karatau over the last four quarters:

	Total wells completed (including production wells)	Average no. of production wells in operation	Average flow rate (m ³ /hour)	Concentration in solution (mg U/l)	Production (lbs)
Q3 2010	85	111	963	173	946,700
Q4 2010	73	135	1,448	182	1,538,900
Q1 2011	45	123	1,404	175	1,265,900
Q2 2011	97	114	1,283	157	1,137,500

A total of 97 wells were installed during Q2 2011. The program for 2011 provides for the installation of 282 wells to achieve the production target for the year.

Acidification of two new production blocks commenced during Q2 2011. Production in Q2 2011 was negatively affected by unscheduled repairs to the settling pond. The repairs have now been completed.

Capital expenditure incurred up to June 30, 2011 was \$18.4 million. Capital expenditure incurred by Karatau in 2011 is expected to be approximately \$45 million on a 100% basis, of which \$15 million is related to well-field development, \$9 million is related to resource definition drilling and \$21 million is related to construction activities and fixed asset purchases.

Financial information: The following table shows the attributable production, sales and production costs for Karatau since the acquisition of Karatau on December 21, 2009:

(All figures are the Corporation's attributable share)	3 months ended				Period ended		
	Jun 30, 2011	Mar 31, 2011	Dec 31, 2010	Sep 30, 2010	Jun 30, 2010	Mar 31, 2010	Dec 31, 2009 ⁽¹⁾⁽²⁾
Production in lbs	568,800	633,000	769,500	473,300	521,100	458,600	73,100
Sales in lbs	211,900	448,500	899,000	1,050,900	260,000	131,800	252,800
Inventory in lbs	944,000	587,200	402,600	533,800	1,111,300	866,900	540,000
Revenues (\$'millions)	10.5	23.2	47.3	41.2	11.4	5.5	10.7
Operating expenses (\$'millions)	1.7	3.6	7.5	9.0	1.8	1.6	3.1
Operating expenses (\$/lb sold)	8	8	8	9	7	12	12
Depreciation (\$'millions)	3.6	7.7	16.2	17.6	5.6	4.1	7.6
Depreciation (\$/lb sold)	17	17	18	17	22	31	30

Notes:

(1) Attributable values since the acquisition date of December 21, 2009

(2) Information for periods prior to January 1, 2010, the date of the Corporation's transition to IFRS, has been prepared in accordance with Canadian generally accepted accounting principles and has not been restated to comply with IFRS.

The cash cost of production for Q2 2011 at \$8 per pound sold is below the Corporation's expectation due to lower than expected expenditure during the period ended June 30, 2011.

AKBASTAU URANIUM MINE

Akbastau is an operating ISR uranium mine located in the Chu Sary Su basin in the Suzak region, South Kazakhstan Oblast, owned indirectly as to 50% by the Corporation through the Akbastau joint venture. The other 50% interest is held by Kazatomprom.

Akbastau is licensed to mine 4,992,000 pounds (1,920 tonnes U) per year from sections 1 and 3 of the Budenovskoye deposit. Akbastau is also planning on commencing production from section 4 of the Budenovskoye deposit following receipt of required regulatory approvals. Akbastau is adjacent to the Karatau mine, which is licensed to mine section 2 within the southern subfield of the Budenovskoye deposit. Akbastau entered into a toll processing agreement with Karatau, under which solutions mined at Akbastau are currently processed at Karatau.

Production: Production from Akbastau was 650,000 pounds (250 tonnes U) in Q2 2011, of which 325,000 pounds (125 tonnes U) is attributable to the Corporation.

Operations: The following is a summary of the operational statistics (100%) for Akbastau since acquisition:

	Total wells completed (including production wells)	Average no. of production wells in operation	Average flow rate (m ³ /hour)	Concentration in solution (mg U/l)	Production (lbs)
Q4 2010 ⁽¹⁾	7	47	387	288	33,400
Q1 2011	52	57	546	259	733,800
Q2 2011	69	62	500	229	650,000

Note:

⁽¹⁾ Since the acquisition date of December 27, 2010.

A total of 69 wells were installed during Q2 2011. The program for 2011 provides for the installation of 141 wells to achieve the production target for the year.

Capital expenditure incurred up to June 30, 2011 was \$17.2 million. Capital expenditure incurred by Akbastau in 2011 is expected to be \$97 million on a 100% basis, of which \$20 million is for well field development, \$15 million for resource definition drilling and \$62 million for the construction of processing facilities and infrastructure.

Financial information: The following table shows the attributable production, sales and production costs for Akbastau since acquisition on December 27, 2010:

	3 months ended		Period ended
	Jun 30, 2011	Mar 31, 2011	Dec 31, 2010 ⁽¹⁾
(All figures are the Corporation's attributable share)			
Production in lbs	325,000	366,900	16,700
Sales in lbs	491,000	129,600	-
Inventory in lbs	425,900	594,800	360,500
Revenues (\$'millions)	25.1	8.2	-
Operating expenses (\$'millions)	5.7	1.7	-
Operating expenses (\$/lb sold)	11	13	-
Depreciation (\$'millions)	4.9	6.4	-
Depreciation (\$/lb sold)	10	49	-

Note:

⁽¹⁾ Attributable values since the acquisition date of December 27, 2010

Depreciation recognized include fair value adjustments processed against finished product on hand on the acquisition date. The fair value adjustment is recognised as non-cash depreciation with the subsequent sale of the inventory. The Corporation expects depreciation per pound sold to be approximately \$13 per pound sold during the remainder of 2011.

The cash cost of production for Q2 2011 at \$11 per pound sold is below the Corporation's expectation due to lower than expected expenditure during the period ended June 30, 2011.

ZARECHNOYE URANIUM MINE

Zarechnoye is an operating ISR uranium mine located in the Syrdarya basin in the Otrar region, South Kazakhstan Oblast. The Corporation has a 49.67% indirect interest in the Zarechnoye uranium mine through its 49.67% interest in the Zarechnoye joint venture. Kazatomprom owns a 49.67% share of the Zarechnoye joint venture and the remaining shareholding is held by a Kyrgyz company.

The design capacity of the Zarechnoye mine is 2,522,000 pounds (970 tonnes U) per year. It is expected that the annualized rate of production will reach this level in 2012. In addition, potential production from a satellite deposit known as South Zarechnoye could be 1,600,000 pounds (615 tonnes U) per year following additional resource definition drilling and receipt of applicable permits.

Production: Production from Zarechnoye was 495,800 pounds (191 tonnes U) in Q2 2011, of which 246,300 pounds (95 tonnes U) is attributable to the Corporation.

Operations: The following is a summary of the operational statistics (100%) for Zarechnoye since acquisition:

	Total wells completed (including production wells)	Average no. of production wells in operation	Average flow rate (m ³ /hour)	Concentration in solution (mg U/l)	Production (lbs)
Q4 2010 ⁽¹⁾	1	153	2,293	48	32,600
Q1 2011	81	154	2,231	42	465,000
Q2 2011	85	166	2,382	38	495,800

Note:

⁽¹⁾ Since the acquisition date of December 27, 2010.

A total of 85 wells were installed during Q2 2011. The program for 2011 provides for the installation of 320 wells to achieve the production target for the year.

Two new production blocks are currently being acidified. Average flow rates have increased in Q2 2011.

Capital expenditure incurred up to June 30, 2011 was \$12 million. Capital expenditure incurred by Zarechnoye in 2011 is expected to be \$30 million on a 100% basis, of which \$21 million is for well field development and \$9 million for resource definition drilling.

Financial information: The following table shows the attributable production, sales and production costs for Zarechnoye since acquisition on December 27, 2010:

(All figures are the Corporation's attributable share)	3 months ended		Period ended
	Jun 30, 2011	Mar 31, 2011	Dec 31, 2010 ⁽¹⁾
Production in lbs	246,300	231,000	16,300
Sales in lbs	264,200	106,100	143,300
Inventory in lbs	202,900	224,000	103,600
Revenues (\$'millions)	18.5	5.4	6.3
Operating expenses (\$'millions)	5.4	1.8	2.3
Operating expenses (\$/lb sold)	20	17	16
Depreciation (\$'millions)	3.4	2.6	3.9
Depreciation (\$/lb sold)	14	22	27

Note:

⁽¹⁾ Attributable values since the acquisition date of December 27, 2010

Up to Q1 2011, depreciation includes fair value adjustments processed against finished product on hand on the acquisition date. The fair value adjustment was recognized as non-cash depreciation with the subsequent sale of the inventory.

The cash cost of production for Q2 2011 at \$20 per pound sold for Q2 2011 is in line with the guidance of \$21 per pound sold.

REVIEW OF DEVELOPMENT PROJECTS - KAZAKHSTAN

KHARASAN URANIUM PROJECT

Kharasan is an ISR uranium development project located in the Suzak region of South Kazakhstan, owned indirectly as to 30% by the Corporation through the Kyzylkum joint venture ("Kyzylkum"), a Kazakhstan registered limited liability partnership. The remaining interests are owned as to 30% by Kazatomprom and as to 40% by Energy Asia (BVI) Ltd., which is owned by a consortium of Japanese utilities and a trading company.

The design capacity of Kharasan is 5,200,000 pounds (2,000 tonnes U) per year, with a current installed capacity of 2,600,000 pounds (1,000 tonnes U) per year.

Production in commissioning: Production in commissioning from Kharasan was 262,300 pounds (101 tonnes U) during Q2 2011, of which 78,700 pounds (30 tonnes U) is attributable to the Corporation.

Operations: The following is a summary of the operational statistics for Kharasan (on a 100% basis) over the last four quarters:

	Total wells completed (including production wells)	Average no. of production wells in operation	Average flow rate (m³/hour)	Concentration in solution (mg U/l)	Production (lbs)
Q3 2010	-	73	558	58	183,600
Q4 2010	-	75	556	69	227,900
Q1 2011	29	77	552	84	237,100
Q2 2011	114	86	581	80	262,300

Acidification of two additional production blocks in the initial test mining area commenced during 2010 to maintain the current level of production. The initial production blocks at Kharasan continued to perform in line with production levels experienced in 2010.

A total of 114 wells were installed in the new test mining area during Q2 2011. The program for 2011 provides for the installation of 294 wells. Results to date from the new test well fields have been positive.

The main factors contributing to the better performance of the new test mining areas are more precise screen interval placement in the ore zone, use of better quality screens and a lower initial acidification rate which avoids fouling of the screens and gas locking of the formation, which caused lower flow rates in the initial test mining blocks. Initial indications are that the new test blocks have lower carbonate levels than the original blocks, leading to decreased consumption of sulphuric acid. Also, the distance between production and injection wells is shorter than in the original test area mining blocks.

Capital expenditure incurred up to June 30, 2011 was \$10.3 million. Capital expenditure for Kharasan in 2011 is expected to be approximately \$30 million on a 100% basis, of which \$21 million is related to well field development and \$9 million for resource definition drilling.

SULPHURIC ACID SUPPLY IN KAZAKHSTAN

In Kazakhstan, ISR uranium operations are highly dependent on sulphuric acid for the extraction of uranium from the host ore body. The supply of sulphuric acid is therefore of critical importance to the Corporation's operations in Kazakhstan.

Although the supply of sulphuric acid is not a cause of immediate concern to the Corporation, the Corporation has identified logistical and transport issues which influence the availability of sulphuric acid to its mines. With the ongoing increase in uranium production in Kazakhstan, the ability to handle supplies, in particular sulphuric acid, is limited by storage capacity at transshipment locations.

The sulphuric acid supply was less than expected up to June 2011, due to shortages being experienced in Kazakhstan. The shortages were caused by one of the producers performing maintenance on its furnaces, which requires a temporary shutdown of operations, and the allocation of sulphuric acid to fertilizing companies during the sowing season. Kharasan and Zarechnoye, which owns transshipment bases used for storage are affected to a lesser extent. The Zarechnoye mine has managed to secure an alternative supply of acid from Russia.

In addressing this storage problem, Kazatomprom has built additional storage of 600 m³ at Taukent and 600 m³ at the Shieli freight handling centres. An additional two storage tanks of 600 m³ capacity each have been constructed at South Inkai, with commissioning planned for Q3 2011. A further 2,400 m³ storage capacity is now approved and operational at the Zhanakorgan transshipment base with an approval to construct tanks for a further 7,200 m³ of acid storage.

Existing sulphuric acid producers in Kazakhstan are projected to increase acid production by 350,000 tonnes in 2011. With nearly all the acid supply coming from within Kazakhstan in 2011, transportation demands for acid rolling stock has been reduced.

SULPHURIC ACID PLANT

The Corporation's SKZ-U joint venture with Kazatomprom and its other joint venture partners continue to advance the development of a sulphuric acid plant near Kharasan at Zhanakorgan. The Corporation's ownership percentage in SKZ-U is 19%. The total construction cost of the plant is expected to be approximately \$199 million, of which approximately 45% has been funded by the joint venture partners to date, with the balance funded by the partners through debt financing. Mechanical completion of the plant is scheduled by the end of 2011 and production of sulphuric acid is expected to commence in 2012. The Corporation has funded \$21.5 million of its debt obligation to date towards the construction of the sulphuric acid plant. The balance of approximately \$13 million will be funded in 2011.

Desmet Ballestra and Soyuzcomplect have completed the designs for the engineering work for the plant. Equipment orders have been placed and materials and equipment are arriving on site. The turbine has been installed. The power generation building is 70% completed. In Q2 2011, the general contractor continued work on installation of gas ducts, pipe rails, welding tests and weld repairs. The administration building and intermediate storage facility has been completed. Laboratory and ancillary buildings are almost completed.

Construction of infrastructure facilities such as the access road, enclosed warehouse storage, rail spur, temporary camps, power and water supply have been completed. A water pond has also been constructed with the piping to be installed during the plant construction stage.

Capital expenditure incurred up to June 30, 2011 was \$31.5 million. Capital expenditure incurred by SKZ-U in 2011 is expected to be approximately \$111 million on a 100% basis.

REVIEW OF DEVELOPMENT PROJECTS – UNITED STATES

POWDER RIVER BASIN, WYOMING

WILLOW CREEK URANIUM PROJECT

Willow Creek is an ISR uranium development project located in Johnson and Campbell Counties in the Powder River Basin. The project includes the licensed and permitted Irigaray ISR central processing plant, the Christensen Ranch satellite ISR facility and associated uranium ore bodies, collectively referred to as the Willow Creek Project.

The design capacity of Willow Creek is 1,300,000 pounds U₃O₈ (500 tonnes U) per year. The Corporation plans to expand the processing capacity at the Willow Creek central plant in line with the U.S. Nuclear Regulatory Commission (“NRC”) licensed capacity of 2,500,000 pounds U₃O₈ (962 tonnes U) per year by incorporating a vacuum dryer that was purchased for use at the Corporation’s Moore Ranch project.

Production in commissioning: Production in commissioning from Willow Creek was 42,800 pounds (17 tonnes U) during Q2 2011.

Operations: The following is a summary of the operational statistics for Willow Creek:

	Total wells completed (including production wells)	Average no. of production wells in operation	Average flow rate (m³/hour)	Concentration in solution (mg U/l)	Production (lbs)
Q1 2011	67	18	103	28	16,500
Q2 2011	68	49	302	26	42,800

The Corporation commenced installation of Mine Unit 7, the first production area at the Willow Creek Project for the Corporation, in April 2010. A total of 68 wells were installed during Q2 2011. Installation of additional wells and associated surface facilities is ongoing.

Commissioning of the third block commenced during 2010 and was placed into production during Q1 2011. It is expected that the fourth and fifth blocks will be commissioned during Q3 2011.

The Corporation commenced installation of Mine Unit 8, the second production area at the Willow Creek Project for the Corporation, in April 2011. Since then, a total of 166 delineation holes were drilled and 19 monitoring wells were cased to date. Installation of additional wells and associated surface facilities is ongoing.

OTHER PROJECTS

The Moore Ranch satellite deposit, also located in Campbell County, 25 miles east of Edgerton, Wyoming, is expected to become a satellite ISR facility with uranium laden resin transported to Willow Creek for final processing. Installation of the monitor well ring for the first planned wellfield commenced during 2010, and was completed during April 2011. Following an internal review of the expected economic returns on the Corporation’s Powder River Basin projects, the development of the Moore Ranch project has been deferred to allow the Corporation to focus on an expansion of the Willow Creek project, which represent a better return on investment at this time.

Work continues with the NRC and the Wyoming Department of Environmental Quality (“WDEQ”) on the Ludeman license and permit reviews. The Ludeman satellite deposit will be licensed in 2013 as a satellite operation that can feed the Willow Creek central processing plant.

At the Allemand-Ross satellite deposit, preparation for the regional baseline hydrologic characterization was completed. Two temporary surface discharge permits were received from WDEQ to conduct the aquifer testing. Aquifer testing was completed in Q2 2011. Results from the aquifer testing are undergoing analysis and will be included in the NRC license and WDEQ permit applications scheduled for submittal later this year.

Revised capital expenditure of approximately \$27 million is expected to be incurred by the Corporation’s Powder River Basin properties during 2011, of which \$21 million is related to wellfield development, \$2 million for the expansion of the Christensen Ranch satellite facility and \$4 million for other construction activities and fixed asset purchases.

REVIEW OF DEVELOPMENT PROJECTS – AUSTRALIA

HONEYMOON URANIUM PROJECT

The Honeymoon Uranium Project is located in South Australia, approximately 75 kilometres northwest of the city of Broken Hill, New South Wales. The Corporation owns 51% of the Honeymoon Uranium Project Joint Venture, which owns the Honeymoon Uranium Project. The remaining 49% of the joint venture is owned by Mitsui & Co., Ltd, (“Mitsui”) who, in October 2008, committed A\$104 million towards the purchase of its interest in Uranium One Australia’s business and the development of the Honeymoon Uranium Project.

The project has a design capacity of 880,000 pounds per year, with an expected mine life (including production ramp-up) of six years.

South Australian and federal government approvals were received to enable the commencement of operations at the Honeymoon Uranium Mine. The approval of the transport management plan is in progress. Calcium removal from groundwater continued and acidification of some wellfield patterns commenced in Q2 2011. Initial indications from the first wellfield are positive and although flow rates are still ramping up, the average concentration of uranium in solution is currently 80 mg/l. Hot commissioning of the process plant is scheduled for Q3 2011.

Capital expenditure incurred by the Corporation on its Honeymoon project up to June 30, 2011 was A\$5.9 million. Capital expenditure of approximately A\$20 million on a 100% basis is expected to be incurred by the Corporation’s Honeymoon project during 2011, of which A\$10 million is related construction activities and A\$10 million for wellfield development and fixed asset purchases.

CORPORATE

OPTION AGREEMENT TO ACQUIRE MANTRA RESOURCES LIMITED

Following the announcement on December 15, 2010 that ARMZ had entered into a definitive agreement to acquire all of the issued shares of Mantra Resources Limited (“Mantra”), Uranium One and ARMZ jointly announced that they had entered into an option agreement to allow Uranium One to acquire Mantra from ARMZ. Mantra’s core asset is the Mkuju River Project in Tanzania. The joint strategy of Uranium One and ARMZ is to create a diversified uranium production company with high quality mines and development projects.

On March 21, 2011, Uranium One announced that Mantra and ARMZ revised the terms of the agreement, which also resulted in a revised option agreement with ARMZ. On June 7, 2011, ARMZ completed the acquisition of Mantra, and Uranium One became the operator of Mantra’s Mkuju River Project in Tanzania pursuant to agreements entered into with ARMZ in connection with the closing. As operator of the project, Uranium One will be responsible to provide funding for the project and consequently entered into a loan agreement with Mantra on June 6, 2011.

Pursuant to the revised agreement with ARMZ, Uranium One has a call option to acquire Mantra from ARMZ, exercisable at any point up to June 7, 2012, with the ability to extend the term of the option to 24 months from 12 months provided that Uranium One partially exercises its call option and acquires approximately 15% of the shares of Mantra for \$150 million before January 31, 2012. The agreement also provides ARMZ with a put option to sell Mantra to Uranium One at the end of the option term. The option to acquire the remaining 85% interest in Mantra, or 100% if the option is not partially exercised, is subject to U1 minority shareholder approval.

The purchase price to be paid will be equal to ARMZ’s acquisition cost of Mantra (approximately A\$1.0 billion), including any additional expenditures contributed by ARMZ to Mantra or its properties and interest thereon at a rate of 2.65% per annum.

MKUJU RIVER PROJECT

The Mkuju River Project is a large scale, uranium development project located in southern Tanzania. Current activity at the Project is focused on licensing and permitting. Earlier this year, the Tanzanian Government submitted an application to the UNESCO World Heritage Committee (“WHC”) for a minor adjustment of the boundary of the adjacent Selous Game reserve to ensure Project activities did not adversely impact the adjacent Reserve, a World Heritage Site comprising some 5 million hectares. At its annual meeting in June 2011, the WHC referred the application for further review, including a visit by the International Union for Conservation and Nature to the Project area later this year.

In the meantime, additional exploration work on the Property is being conducted in the area of the expected Special Mining License. Subject to the issuance of that License and to approval from the management of the Game Reserve, Mantra intends to commence work later this year to upgrade certain sections of the access road leading to the Project area. In addition, a definitive feasibility study relating to the Project is being prepared by Uranium One and is expected to be finalized prior to year end.

THE FUKUSHIMA INCIDENT

On March 11, 2011, north-eastern Japan suffered the devastating impacts of a 9.0 magnitude earthquake and subsequent tsunami. These events have, among other things, led to a reduction in uranium demand in Japan due to the permanent shutdown of the Fukushima Daiichi units and program delays or extended outages at other reactors. In the wake of Fukushima, most countries with nuclear power plants have embarked on comprehensive nuclear safety audits and reviews. The Corporation expects that these audits will validate the safety of nuclear power whose record continues to compare favorably to the risks and environmental consequences of other energy sources. The United States Nuclear Regulatory Commission recently released its 90-day report on Fukushima and concluded that the U.S. nuclear fleet (the world’s largest) continues to be operated safely and reliably with robust defences and procedures in place. It will however, recommend additional oversight and some site-specific measures to further enhance those safety margins.

While there may be some delays to nuclear power plants currently in the planning or permitting stages, the Corporation believes that reactors under construction around the world will continue to move ahead, particularly in the emerging markets of China, India, Russia, Korea and the United Arab Emirates, where over 55% of the new build is expected to occur. The nuclear programs of these countries are the energy cornerstones of their national economic policies and, while lessons from Fukushima will be incorporated, they have all reaffirmed their full commitment to nuclear energy. China recently revised its 10 year projection of installed nuclear capacity to a range of 70 to 80 Gwe and, while this was down from the previous 90 Gwe, this level of growth still increases China’s uranium needs to 20% of global demand by 2020.

While the impacts from Fukushima are not yet fully known, Uranium One’s expectation is that uranium demand is expected to be reduced downwards by 8% to 10% over the next decade. Given the relative scarcity of high quality, new uranium development projects to replace existing mines, uranium market conditions should continue to be positive, particularly for diversified, low cost producers such as Uranium One.

SUMMARY OF QUARTERLY RESULTS

(US dollars in millions
except per share and per
lb amounts)

	3 months ended							
	Jun 30, 2011 \$	Mar 31, 2011 \$	Dec 31, 2010 \$	Sep 30, 2010 \$	Jun 30, 2010 \$	Mar 31, 2010 \$	Dec 31, 2009 ⁽³⁾ \$	Sep 30, 2009 ⁽³⁾ \$
Revenues	112.9	101.9	152.3	73.1	66.0	35.5	69.1	21.3
Net earnings / (loss)	29.7	14.0	(112.9)	(44.8)	5.4	(1.4)	179.6	(15.3)

Notes:

- (1) The basic and diluted earnings / loss per share are computed separately for each quarter presented and therefore may not add up to the basic and diluted earnings / loss per share for the year ended December 31, 2010.
- (2) Gold One International Ltd was classified as a discontinued operation in Q1 2008.
- (3) Information for periods prior to January 1, 2010, the date of the Corporation's transition to IFRS, has been prepared in accordance with Canadian generally accepted accounting principles then applicable and has not been restated to comply with IFRS.

NON-GAAP MEASURES

ADJUSTED NET EARNINGS / LOSS

The Corporation has included the following non-GAAP performance measures throughout this document: adjusted net earnings / loss and adjusted net earnings / loss per share. Adjusted net earnings / loss and adjusted net earnings / loss per share do not have any standardized meaning prescribed by GAAP and are therefore unlikely to be comparable to similar measures reported by other companies. The Corporation believes that, in addition to conventional measures prepared in accordance with GAAP, certain investors use this information to evaluate the Corporation's performance and ability to generate cash flow. This is provided as additional information and should not be considered in isolation of, or as a substitute for, measures of performance prepared in accordance with GAAP.

Adjusted net earnings / loss is calculated by adjusting the net profit / loss from continuing operations with unrealized foreign exchange gains / losses on future income tax liabilities, impairments, cost of suspension of operations, gains / losses from the sale of assets and the effect of the tax rate adjustment on future income tax liabilities. These items are added back due to their inherent volatility and / or infrequent occurrence.

The following table provides a reconciliation of adjusted net earnings / loss to the financial statements:

	3 months ended		6 months ended	
	Jun 30, 2011	Jun 30, 2010	Jun 30, 2011	Jun 30, 2010
	\$'millions	\$'millions	\$'millions	\$'millions
Net earnings	29.7	5.4	43.7	4.0
Fair value adjustments	(3.4)	(6.7)	(3.4)	(17.1)
Impairment of mineral interest, plant and equipment and closure costs	-	0.7	-	1.9
Corporate development expenditure	0.2	-	0.9	-
Restructuring costs	0.6	-	0.6	-
Gain on sale of available for sale securities	-	8.3	-	8.4
Adjusted net earnings / (loss)	27.1	7.7	41.8	(2.8)
Adjusted net earnings / (loss) per share – basic (\$)	0.03	0.01	0.04	(0.00)
Adjusted net earnings / (loss) per share – diluted (\$) ⁽¹⁾	0.03	0.01	0.04	(0.00)
Weighted average number of shares (millions) – basic	957.2	587.5	957.2	587.5
Weighted average number of shares (millions) – diluted	1,049.7	680.3	1,049.7	680.3

Notes:

⁽¹⁾ The diluted earnings per share includes an adjustment increasing earnings and the weighted average number of shares.

AVERAGE REALIZED SALES PRICE PER POUND AND CASH COST PER POUND SOLD

The Corporation has included the following non-GAAP performance measures throughout this document: average realized sales price per pound and cash cost per pound sold. The Corporation reports total cash costs on a sales basis. In the uranium mining industry, these are common performance measures but do not have any standardized meaning, and are non-GAAP measures. The Corporation believes that, in addition to conventional measures prepared in accordance with GAAP, the Corporation and certain investors use this information to evaluate the Corporation's performance and ability to generate cash flow. This is provided as additional information and should not be considered in isolation of, or as a substitute for, measures of performance prepared in accordance with GAAP.

As in previous periods, sales per pound and cash cost per pound sold are calculated by dividing the revenues and operating expenses found in the income statement in the consolidated financial statements by the pounds sold in the period.

RESULTS OF OPERATIONS AND DISCUSSION OF FINANCIAL POSITION

SELECTED FINANCIAL INFORMATION

The Corporation's consolidated financial statements and the financial data set out below have been prepared in accordance with GAAP. Uranium One and its operating subsidiaries use the United States dollar, the Kazakhstan tenge, the Australian dollar and the Canadian dollar as measurement currencies.

(US dollars in millions except per share and per lb amounts)	3 months ended		6 months ended	
	Jun 30, 2011	Jun 30, 2010	Jun 30, 2011	Jun 30, 2010

Total assets	2,972.3	2,028.6	2,972.3	2,028.6
Long term financial liabilities	686.9	741.8	686.9	741.8
Average realized uranium price per lb	58	43	59	44
Average spot price per lb	56	41	62	42
	Lbs	Lbs	Lbs	Lbs
Attributable sales volume	1,952,100	1,517,500	3,633,700	2,281,900
Attributable production volume	2,240,900	1,780,000	4,549,000	3,500,200
Attributable inventory ⁽¹⁾	3,884,700	3,279,500	3,884,700	3,279,500

Notes:

⁽¹⁾ Inventory as at June 30, 2010 is attributable to the Akdala, South Inkai and Karatau Uranium Mines. Inventory as at June 30, 2011 is attributable to the Akdala, South Inkai, Karatau, Akbastau and Zarechnoye Uranium Mines. Revenue from production during commissioning of the Corporation's development projects is credited against capital expenditures.

RESULTS OF OPERATIONS

THREE MONTHS ENDED JUNE 30, 2010

URANIUM SALES, INVENTORY AND OPERATING COSTS

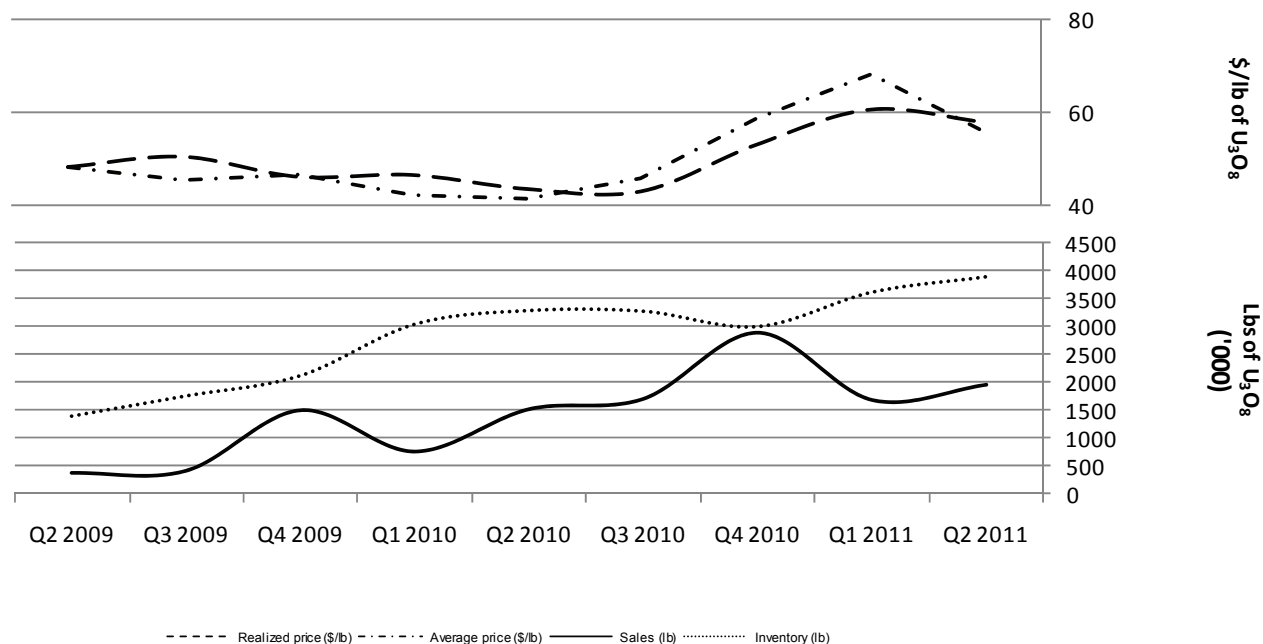

The Corporation's uranium sales, costs of uranium sales and earnings from mine operations were as follows:

	Q2 2011					Q2 2010				
	Akdala	South Inkai	Karatau	Akbastau	Zarechnoye	Total / Average	Akdala	South Inkai	Karatau	Total / Average
Revenues	15.8	43.0	10.5	25.1	18.5	112.9	26.0	28.6	11.4	66.0
Attributable sales volumes (lb '000)	258.2	726.8	211.9	491.0	264.2	1,952.1	611.7	645.8	260.0	1,517.5
Average realized price (\$/lb sold)						58				43
Average spot price (\$/lb)						56				41
Closing spot price (\$/lb)						54				42
Operating expenses (\$million)	3.7	12.0	1.7	5.7	5.4	28.5	7.3	13.2	1.8	22.3

Notes:

(1) Includes fair value adjustments recognized in inventory on acquisition of Karatau, Akbastau and Zarechnoye and expensed as non-cash depreciation with the sale of the revalued inventory.

The average realized uranium price per pound sold relative to the average spot price per pound, and the relationship between volumes sold and inventory, over the last eight quarters are as follows

Revenue of \$112.9 million in Q2 2011 increased by 71% compared to the \$66.0 million in Q2 2010, due to volume sold increasing by 434,500 pounds (29% higher than in Q2 2010) and a \$14 per pound increase in the average realized uranium price compared to Q2 2010.

The sales mix for Q2 2011 was 13% for Akdala, 37% for South Inkai, 11% for Karatau, 25% for Akbastau and 14% for Zarechnoye, compared to Q2 2010 where Akdala contributed 40%, South Inkai 43% and Karatau 17% of the sales. The sales mix is expected to align with the production ratio of each mine over time, influenced by the effect of long term contracts on inventory build-up.

Operating expenses per pound sold were \$15 per pound in Q2 2011 and Q2 2010.

There is possible volatility in operating expenses due to the timing of the acidification of new wellfields. Sulphuric acid use is higher during the initial acidification process, and the sulphuric acid cost per pound is higher during these periods. The Corporation carries inventory at the weighted average cost of production, calculated at various stages of the production process. As a result, the weighted average cost increases during periods with higher levels of acidification.

Attributable inventory increased from 2,992,700 pounds at December 31, 2010 to 3,884,700 pounds at June 30, 2011. The increase in attributable inventory for Akdala and Karatau was 547,500 pounds and 541,400 pounds, respectively. The increase is due to production exceeding sales. The timing of sales is dependent on contract delivery dates.

GENERAL AND ADMINISTRATIVE EXPENSES

General and administrative expenses, including stock option and restricted share expenses of \$2.7 million, was \$11.2 million in Q2 2011, compared to \$10.0 million Q2 2010, including stock option and restricted share expenses of \$1.8 million. General and administration expenses in Q2 2011 include restructuring cost of \$0.6 million for moving the Corporation's head office from Vancouver to Toronto.

The general and administrative expense for Q2 2011 includes salaries and directors' fees of \$3.0 million, consulting and advisor fees of \$1.5 million, travel expenses of \$0.7 million and office rent of \$0.7 million.

EXPLORATION

The Corporation determines its discretionary exploration expenditure each year during its planning cycle. Exploration expenditure relates to exploration programs undertaken on the Corporation's tenures in the United States, Canada and Australia and was \$1.2 million during Q2 2011, compared to \$1.4 million during Q2 2010.

CARE AND MAINTENANCE, CLOSURE COSTS AND IMPAIRMENT

The Shootaring mill in Utah was placed on care and maintenance in 2008 as the Corporation concluded that it could not be operated economically with the currently available resource base.

Total care and maintenance costs in Q2 2011 were \$0.4 million, compared to care and maintenance costs of \$0.4 million for Q2 2010.

INTEREST AND OTHER

Interest income was \$2.0 million in Q2 2011 and \$1.2 million Q2 2010. In addition to the interest earned on loans to joint ventures, interest is earned on funds held on deposit by the Corporation.

Interest accrued on the Corporation's 2006 Debentures was \$2.7 million in Q2 2011, compared to \$2.5 million in Q2 2010. Interest accrued on the Corporation's 2010 Debentures was \$6.0 million and \$5.6 million in Q2 2011 and Q2 2010, respectively. The increase is a result of the strengthening of the Canadian dollar against the US dollar.

The JUMI debentures were redeemed during 2010, and accrued interest of \$3.8 million during Q2 2010.

Interest on contingent payments decreased in Q2 2011 as the interest accrual on the Karatau contingent payment is offset with interest accrued on the receivable acquired as part of the ARMZ transaction during 2010.

Accrued interest increased to \$2.2 million in Q2 2011 from \$0.6 million in Q2 2010, mainly due to the increase in interest bearing liabilities of the Corporation's joint ventures.

FOREIGN EXCHANGE GAIN / LOSS

Foreign exchange losses during Q2 2011 were \$0.3 million, compared to foreign exchange gains of \$17.1 million in Q2 2010.

INCOME TAXES

The current income tax expense for Q2 2011 of \$13.1 million mainly consists of income tax paid and payable in Kazakhstan on profits from the Corporation's mines in Kazakhstan. For Q2 2010 a \$2.2 million income tax expense was recorded, mainly relating to the Akdala, South Inkai and Karatau mines.

The future income tax recovery in Q2 2011 of \$2.6 million consists of the following:

- Recovery of future income tax liabilities of the Kazakhstan mines of \$1.6 million. The recovery represents the depletion of the future income tax liabilities that were created on the acquisition of the mines in Kazakhstan, and was based on the excess purchase price paid on acquisition; and
- An increase of \$1.0 million in future income tax assets due to temporary differences and tax loss carry forwards, which is set off against the future income tax liability.

NET EARNINGS / LOSS

The net earnings for Q2 2011 was \$29.7 million or \$0.03 per share, compared to net earnings of \$5.4 million or \$0.01 per share for Q2 2010.

SIX MONTHS ENDED JUNE 30, 2011

URANIUM SALES, INVENTORY AND OPERATING COSTS

Revenue of \$214.8 million for the six months ended June 2011 increased by 112% compared to the \$101.5 million for the six months ended June 2010, due to volume sold increasing by 1,352,000 pounds (59% higher than in the six months ended June 30, 2010) and an increase in the average realized uranium price compared to Q2 2010.

Operating expenses per pound sold decreased by 7% from \$16 per pound for the six months ended June 2010 to \$15 per pound for the six months ended June 2011.

GENERAL AND ADMINISTRATIVE EXPENSES

General and administrative expenses, including stock option and restricted share expenses of \$4.1 million, was \$23.4 million for the six months ended June 2011, compared to \$19.4 million for the six months ended June 2010, including stock option and restricted share expenses of \$3.8 million.

The general and administrative expense for the six months ended June 2011 includes salaries and directors' fees of \$9.3 million, consulting and advisory fees of \$3.4 million, travel expenses of \$1.3 million and office rent of \$1.4 million.

EXPLORATION

The Corporation determines its discretionary exploration expenditure each year during its planning cycle. Exploration expenditure relates to exploration programs undertaken on the Corporation's tenures in the United States, Canada and Australia and was \$2.4 million during the six months ended June 2011, compared to \$2.3 million during the six months ended June 2010.

CARE AND MAINTENANCE, CLOSURE COSTS AND IMPAIRMENT

The Shootaring mill in Utah was placed on care and maintenance in 2008 as the Corporation concluded that it could not be operated economically with the currently available resource base.

The Corporation incurred care and maintenance costs of \$1.2 million on Dominion in the six months ended 2010. The sale of Dominion was finalized during April 2010,

Total care and maintenance costs for the six months ended June 2011 were \$0.7 million, compared to care and maintenance costs of \$2.0 million for the six months ended June 2010.

INTEREST AND OTHER

Interest income amounted to \$3.8 million for the six months ended June 2011, compared to \$2.2 million for the six months ended June 2010. In addition to the interest earned on loans to joint ventures, interest is earned on funds held on deposit by the Corporation.

Interest accrued on the Corporation's 2006 Debentures was \$5.3 million for the six months ended June 2010, compared to \$4.9 million for the period ended June 2010. The decrease is the result of a change in the estimated timing of the repayment of the debenture from December 2009 to December 2011. Interest accrued on the Corporation's 2010 Debentures was \$11.9 million for the six months ended June 2011 and \$6.9 million for the six months ended June 2010. The 2010 Debentures were issued on March 12, 2010. The increase is a result of the strengthening of the Canadian dollar against the US dollar.

Interest on contingent payments decreased as the interest accrual on the Karatau contingent payment is offset with interest accrued on the receivable acquired as part of the ARMZ transaction during 2010.

FOREIGN EXCHANGE GAIN / LOSS

Foreign exchange losses during the six months ended June 2011 were \$5.6 million, compared to foreign exchange gains of \$21.1 million for the six months ended June 2010.

INCOME TAXES

The current income tax expense for the six months ended June 2011 of \$26.4 million mainly consists of income tax paid and payable in Kazakhstan on profits from the Corporation's mines. For the six months ended June 2010 a \$9.4 million income tax expense was recorded, mainly relating to the Akdala, South Inkai and Karatau mines.

The future income tax recovery for the six months of \$8.3 million mainly consists of the following:

- Recovery of future income tax liabilities of the Kazakhstan mines of \$5.5 million. The recovery mainly represents the depletion of the future income tax liabilities that were created on the acquisition of the mines in Kazakhstan, and was based on the excess purchase price paid on acquisition; and
- An increase of \$2.8 million in future income tax assets due to temporary differences and tax loss carry forwards, which is set off against the future income tax liability.

NET EARNINGS / LOSS

The net earnings for the six months ended June 2011 was \$43.7 million or \$0.05 per share, compared to earnings of \$4.0 million or \$0.01 per share for the six months ended June 2010.

FINANCIAL CONDITION

CASH AND CASH EQUIVALENTS

On June 30, 2011, the Corporation had cash and cash equivalents of \$318.4 million, compared to \$324.4 million at December 31, 2010. Cash and cash equivalents on June 30, 2011 include \$28.2 million held by Betpak Dala, \$1.9 million held by Karatau, \$3.2 million held by Akbastau, \$3.2 million held by Zarechnoye, \$4.8 million held by Kyzylkum, \$3.9 million held by SKZ-U and \$4.7 million held by the Honeymoon Joint Venture. Cash held by the joint ventures is used to fund joint venture operations.

LOANS TO JOINT VENTURES

Kyzylkum has repaid the \$19.0 million outstanding on the loan from the Corporation at December 31, 2010 as a result of the restructuring of its debt. In 2011 Uranium One made a capital contribution of \$24.0 million to Kyzylkum's charter capital. The capital contribution was matched by the joint venture partners, with the contributions having no effect on the percentage ownership.

The Corporation transferred \$3.5 million to SKZ-U in the first six months of 2011 as part of its obligation to provide project financing for the construction and commissioning of the sulphuric acid plant in Kazakhstan

BORROWED URANIUM CONCENTRATES AND URANIUM CONCENTRATES LOANS

In 2008, the Corporation borrowed 200,000 pounds pursuant to a uranium loan agreement to provide the Corporation with flexibility to meet its long term contractual obligations in terms of future uranium sales contracts and mitigate the risk of delivery delays. A liability of \$10.9 million is accounted for in respect of the borrowed uranium concentrates of 200,000 pounds as at June 30, 2011. The loan agreement was amended subsequent to June 30, 2011, and the 200,000 pounds of material is to be returned in 2013. The loans are therefore classified as a current liability as at June 30, 2011.

INVENTORIES AND PURCHASED URANIUM CONCENTRATES

The value of inventories as at June 30, 2011 increased to \$109.8 million from \$90.0 million held at December 31, 2010. Finished uranium concentrates and solutions and concentrates in process increased by \$17.9 million in line with the increased quantity of product inventory from 2,993,200 pounds to 3,884,700 pounds.

The Corporation revalued acquired inventory from the Akbastau and Zarechnoye acquisition during the 2010 financial year to its fair value determined on acquisition using market indicators at that time. The fair value adjustment included during December 31, 2010 was recognized in the income statement on the sale of the inventory during Q1 2011.

Materials and supplies increased by \$1.9 million in the period ended June 30, 2011.

As at June 30, 2011 the Corporation had attributable inventory of 3,884,700 pounds, of which approximately 811,400 pounds was held at conversion facilities. Sales of product are normally completed at conversion facilities when material is transferred to customers by way of a book transfer. The product on hand at conversion facilities as at June 30, 2011 is committed for delivery under existing sales contracts subsequent to quarter end. Shipping times for finished product can be up to four months, depending on the distance between the mine site and conversion facility, where sales are completed through transfer of legal title and ownership.

A summary of the Corporation's attributable inventory carried at June 30, 2011 is as follows:

Category	Location	Lbs
In process	Mine site	240,400
In process	In transit to external processing facilities	-
In process	External processing facilities	556,200
Finished product ready to be shipped	Mine site	973,300
Finished product ready to be shipped	External processing facilities	698,800
Finished product In transit	In transit	604,600
Finished product at conversion facility	Conversion facilities	811,400
Total inventory		3,884,700

Production during commissioning of the Corporation's development projects is not accounted for as inventory. Attributable material produced and on hand from the Corporation's development projects at June 30, 2011 was 186,000 pounds at Kharasan and Willow Creek.

MINERAL INTERESTS, PLANT AND EQUIPMENT

The values of mineral interests, plant and equipment increased by \$24.7 million during the six months ended June 30, 2011.

The significant movement consists of:

- Depreciation decreasing the net value by \$58.9 million;
- Capital additions of \$72.7 million; and
- Foreign exchange adjustments increasing the value by \$16.4 million.

CURRENT LIABILITIES

The outstanding amount on the Corporation's 2006 Debentures increased mainly due to the interest accrued and the strengthening of the Canadian dollar against the US dollar since December 31, 2010, partially offset by the coupon interest payments. The 2006 Debentures are denominated in Canadian dollars and mature on December 31, 2011.

CURRENT LIABILITIES RELATED TO THE ACQUISITION OF AKBASTAU AND ZARECHNOYE

Prior to acquisition on December 27, 2010, Zarechnoye entered into a discounted sales price contract for the sale of uranium. The discount on the sales price under this contract was higher than the current industry practice uranium sales contracts in Kazakhstan. The Corporation accounted for this contract as an unfavourable contract and recognized a liability of \$11.6 million pursuant to this contract on acquisition of Zarechnoye. The Corporation received \$11.6 million in cash on acquisition to compensate for the unfavourable contract. On sale of uranium into the unfavourable contract, the liability is reduced, with a corresponding credit against revenue. \$0.8 million was recognized in the income statement during the six months ended June 30, 2011 and \$0.3 million was recognized during 2010.

CURRENT AND LONG TERM PORTION OF JOINT VENTURE DEBT

Kyzylkum had loans outstanding of \$48.5 million, \$62.4 million and \$44.1 million from the Japan Bank for International Cooperation ("JBIC"), Citibank and Kazatomprom, respectively. At June 30, 2011, the Corporation's share of Kyzylkum's loans is \$46.5 million, of which \$16.0 million is classified as short term.

In addition to the \$21.5 million loan from the Corporation, SKZ-U has loans outstanding of \$18.9 million, \$17.9 million and \$55.0 million from Sumitomo Mitsui Banking Corporation, Mizuho Corporate Bank and JBIC, respectively. At June 30, 2011, the Corporation's share of SKZ-U's loans is \$17.4 million, which is classified as long term.

Akbastau had loans outstanding of \$10.0 million, \$3.5 million and \$49.9 million from Alpha Bank, GRK and Effective Energy. At June 30, 2011, the Corporation's share of these loans is \$31.7 million, which is classified as long term.

Zarechnoye had loans outstanding of \$62.0 million and \$3.4 million from Effective Energy and Citibank, respectively. At June 30, 2011, the Corporation's share of these loans is \$32.5 million, of which \$1.7 million is classified as short term.

NON-CURRENT LIABILITIES

The outstanding amount on the Corporation's 2010 Debentures increased mainly due to the interest accrued and the strengthening of the Canadian dollar against the US dollar since December 31, 2010, partially offset by the coupon interest payments. The 2010 Debentures are denominated in Canadian dollars and mature on March 13, 2015.

EQUITY

Changes in shareholders' equity consist mainly of the net earnings for the period of \$43.7 million and a gain of \$11.3 million recognized on translation of foreign operations.

LIQUIDITY AND CAPITAL RESOURCES

WORKING CAPITAL AND CASH GENERATED FROM OPERATIONS

At June 30, 2011 the Corporation had working capital of \$233.3 million. Included in this amount is cash and cash equivalents of \$318.4 million, which includes the Corporation's proportionate share of cash and cash equivalents at its joint venture operations in Kazakhstan and Australia. Cash held by the Corporation's joint venture operations is applied to the business of the joint ventures and cash flows between the Corporation and the joint ventures normally only occur through loans to the joint ventures and dividends paid by the joint ventures. The Corporation expects that Betpak Dala will fund its capital requirements from cash flow from its operations, without the need for finance from the Corporation or third parties. Karatau is expected to fund its capital requirements through short term loans and cash flow from its operations.

The interest earned on the Corporation's cash balances will be applied to existing commitments in respect of the Corporation's development projects and other current commitments.

The Corporation earns revenue from its mines in Kazakhstan. Additional sales revenue will be earned from uranium sales when the Corporation's development projects are commissioned.

Uranium is sold under forward long-term delivery contracts. Contracted deliveries are planned to be filled from the Corporation's mining operations. The ability to deliver contracted product is therefore dependent upon the continued operation of the mining operations as planned. The Corporation has entered into market-related sales contracts with price mechanisms that reference the market price in effect at or near the time of delivery. In addition, the Corporation has negotiated floor price protection in most of its sales contracts. For 2011, committed sales under contract represent approximately 66% of expected production, without taking any available inventory into account.

At June 30, 2011, there were outstanding sales commitments for 2.2 million pounds in respect of sales contracts for the Dominion project, which were not included in the sale of Uranium One Africa in 2010. The Corporation plans to meet these commitments from the production of other group entities and, if required, additional purchases from third parties. The Corporation has floor price protection in all of the Dominion contracts and does not expect to incur material losses in satisfying its delivery commitments thereunder.

CURRENT AND FUTURE SOURCES OF FUNDING

The Corporation has two convertible debentures outstanding as at June 30, 2011. In addition, the Corporation's joint ventures in Kazakhstan have amounts outstanding on several debt facilities.

Uranium One's 2006 Debentures have a face value of C\$155 million and mature on December 31, 2011 with fixed interest at a rate of 4.25% payable semi-annually in arrears. The Corporation plans to repay principal and interest owing under the 2006 Debentures from internal cash resources. The 2010 Debentures have a face value of C\$260 million and mature on March 13, 2015, with interest payable at a rate of 5.0% per annum, payable semi-annually in arrears being funded from internal resources.

Capital and operational expenditures by the Betpak Dala and Karatau joint ventures in 2011 are expected to be funded through the joint ventures' operating cash flow.

Karatau owed \$37.5 million to financial institutions on December 31, 2010 and the Corporation's proportionate share of the amount owing was \$18.8 million, which has been repaid during Q2 2011. The loans were repaid from Karatau's operating cash flow.

The Corporation and its joint venture partners in Kyzylkum made \$80 million in capital contributions to the joint venture in 2011, with further capital contributions planned for 2012 and 2013. The Corporation's share of the capital contribution in 2011 was \$24 million, with the other joint venture partners contributing proportionally to their ownership interests. The proceeds received by Kyzylkum were used to repay the outstanding loan from the Corporation, service its debt repayments and to fund capital and operational expenditure in 2011.

On June 30, 2011, Akbastau and Zarechnoye had outstanding facilities of \$62.9 million and \$65.4 million, respectively. The Corporation's share of these facilities was \$31.4 million and \$32.5 million, respectively. Pursuant to the terms of the acquisition agreement, ARMZ agreed to fund, or arrange funding for, the Corporation's proportionate share of the funding required by Akbastau and Zarechnoye for a period of 18 months after closing of the transaction.

The Corporation utilized the proceeds from the Mitsui transaction received in December 2008 for the development of Honeymoon and for general corporate purposes in Australia. The Corporation expects to contribute \$27 million towards the funding of Honeymoon in 2011.

SKZ-U concluded loan agreements with JBIC in the amount of \$133 million, and Uranium One in the amount of \$31 million to finance the construction of a sulphuric acid plant in Kazakhstan and drew down \$95.2 million under these facilities to date.

In addition to the factors described under “Risks and Uncertainties” below, Uranium One’s ability to raise capital is highly dependent on the commercial viability of its projects and the underlying price of uranium. Other risk factors, including the Corporation’s ability to develop its projects into commercially viable mines, international uranium industry competition, public acceptance of nuclear power and governmental regulation, can also adversely affect Uranium One’s ability to raise additional funding. There is no assurance that additional sources of funding, if required, will be forthcoming. Please refer to “Risks and Uncertainties”.

CONTRACTUAL OBLIGATIONS

There were no material changes in contractual obligations since December 31, 2010.

COMMITMENTS AND CONTINGENCIES

Due to the size, complexity and nature of the Corporation’s operations, various legal and tax matters arise in the ordinary course of business. The Corporation accrues for such items when a liability is both probable and the amount can be reasonably estimated. In the opinion of management, these matters will not have a material effect on the consolidated financial statements of the Corporation.

Betpak Dala is disputing a tax assessment of approximately \$23 million in respect of the 2004 to 2008 taxation years, which primarily relates to excess profit tax. Excess profit tax is not applicable to the Corporation’s operations in Kazakhstan following the January 1, 2009 amendments to Kazakhstan’s tax code. Betpak Dala’s appeals against the tax assessment have so far been unsuccessful and Betpak Dala intends to apply to the Kazakh Supreme Court for leave to appeal the lower courts’ decisions. Betpak Dala paid \$18 million of the disputed amount, to ensure that there is no interruption in its business. Following consultation with external legal counsel, the Corporation assessed there to be a high probability to successfully recover payments made in respect of the assessment. Accordingly, the Corporation has not recognised the income tax expense, but recorded the payment in trade and other receivables that the Corporation expects to recover against future tax assessments.

In accordance with a loan agreement between Uranium One and Mantra dated June 6, 2011, Uranium One has agreed to provide a credit facility to fund the development of the Mkuju River Project and other Mantra exploration activities. The credit facility is guaranteed by ARMZ.

Other than the loan agreement with Mantra and the contingent tax payment of Betpak Dala, there were no material changes to the Corporation’s commitments and contingencies since December 31, 2010.

OFF-BALANCE SHEET ARRANGEMENTS

The Corporation has no off-balance sheet arrangements.

OUTSTANDING SHARE DATA

As of August 8, 2011, there were issued and outstanding 957.2 million common shares.

A warrant was issued in connection with the acquisition of the Corporation’s interest in Kyzylkum entitling the holder to acquire 6,964,200 shares in Uranium One for no additional consideration upon completion of commissioning of the Kharasan Uranium Project. Uranium One has reserved a total of 57,200 common shares for issuance to third parties under certain property option and joint venture agreements.

Uranium One has the following convertible debentures outstanding:

- The 2006 Debentures, with 155,250 convertible debentures outstanding, each convertible to 63.45 common shares of Uranium One, representing 9,850,888 common shares. Fractional shares will be settled with cash; and
- The 2010 Debentures, with 259,985 convertible debentures outstanding, each convertible to 317.46 common shares of Uranium One, representing 82,534,838 common shares of Uranium One. Fractional shares will be settled with cash.

DIVIDENDS

Holders of common shares are entitled to receive dividends if, and when declared by the Board of Directors. There are no restrictions on Uranium One’s ability to pay dividends except as set out under its governing statute.

CRITICAL JUDGEMENTS AND ESTIMATES

The preparation of consolidated financial statements in conformity with IFRS requires the Corporation’s management to make estimates and assumptions about future events that affect the amounts reported in the consolidated financial statements and related notes to the consolidated financial statements. Actual results may differ from those estimates. Information about areas of judgment and key sources of uncertainty and estimation is contained in the accounting policies and/or the notes to the consolidated financial statements.

The following are the key sources of estimation uncertainty at the end of the reporting period, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year:

Recoverability of accounts receivable and investments

Provision is made against accounts that in the estimation of management may be impaired. The recoverability assessment of accounts receivable is based on a range of factors including the age of the receivable and the creditworthiness of the customer. The provision is assessed monthly with a detailed formal review of balances and security being conducted at year-end. Determining the recoverability of an account involves estimation as to the likely financial condition of the customer and their ability to subsequently make payment. To the extent that future events impact the financial condition of the customers, these provisions could vary significantly.

Investments in securities are reviewed for impairment at the end of each reporting period. When the fair value of the investment falls below the Corporation's carrying value, and it is considered to be significant or prolonged, an impairment charge is recorded to the consolidated income statement for the difference between the investment's carrying value and its estimated fair value at the time. In making the determination as to whether a decline is considered prolonged, the Corporation considers such factors as the duration and extent of the decline, the investee's financial performance, and the Corporation's ability and intention to retain its investment for a period that will be sufficient to allow for any anticipated recovery in the investment's market value. Differing assumptions could affect whether an investment is impaired in any period or the amount of the impairment.

Net realizable value of inventories

In determining the net realizable value of inventories, the Corporation estimates the selling prices, based on published market rates, cost of completion and cost to sell. To the extent that future events impact the saleability of inventory these provisions could vary significantly.

Estimated reserves, resources and exploration potential

Reserves are estimates of the amount of product that can be extracted from the Corporation's properties, considering both economic and legal factors. Calculating reserves and estimates requires decisions on assumptions about geological, technical and economic factors, including quantities, grades, production techniques, recovery rates, production costs, transport costs, commodity demand, prices and exchange rates.

Estimating the quantity and/or grade of reserves require the analysis of drilling samples and other geological data.

Estimates of reserves may change from period to period as the economic assumptions used to estimate reserves change from period to period, and because additional geological data is generated during the course of operations. Changes in reported reserves may affect the Corporation's financial position in a number of ways, including the following:

- Asset carrying values may be affected due to changes in estimated future cash flows;
- Depreciation and amortization charged in the consolidated income statement may change where such charges are determined by the units of production basis, or where the useful economic lives of assets change; and
- The carrying value of deferred tax assets may change due to changes in estimates of the likely recovery of the tax benefits.

Impairment of mineral interests, property, plant and equipment

Assets or cash generating units are evaluated at each reporting date to determine whether there are any indications of impairment. If any such indication exists, a formal estimate of recoverable amount is performed and an impairment loss recognized to the extent that carrying amount exceeds recoverable amount. The recoverable amount of an asset or cash generating group of assets is measured at the higher of fair value less costs to sell and value in use.

Fair value is determined as the amount that would be obtained from the sale of the asset in an arm's length transaction between knowledgeable and willing parties, and is generally determined as the present value of the estimated future cash flows expected to arise from the continued use of the asset, including any expansion prospects, and its eventual disposal. Present values are determined using a risk-adjusted pre-tax discount rate appropriate to the risks inherent to the asset. Future cash flow estimates are based on expected production and sales volumes, commodity prices (considering current and historical prices, price trends and related factors), reserves, operating costs, restoration and rehabilitation costs and future capital expenditure. The Corporation's management is required to make these estimates and assumptions which are subject to risk and uncertainty; hence there is a possibility that changes in circumstances will alter these projections, which may impact the recoverable amount of the assets. In such circumstances, some or all of the carrying value of the asset may be impaired and the impairment would be charged against the consolidated income statement.

Expected economic lives of, estimated future operating results and net cash flows from mineral interests

The carrying amounts of mineral interests are depreciated to their estimated residual value over the estimated economic life of the specific assets to which they relate.

Depreciation commences on the date of commissioning and is based on reserves on a unit of production basis.

Residual values and useful lives are reviewed, and adjusted if appropriate, at least annually. Changes in estimated residual values or useful lives are accounted for prospectively. In applying the units of production method, depreciation is normally calculated using the quantity of material extracted from the mine in the period as a percentage of the total quantity of material to be extracted in current and future periods based on proved and proven reserves.

In assessing the life of a mine for accounting purposes, mineral resources are only taken into account where there is a high degree of confidence of economic extraction.

The Corporation's operating result and net cash flow forecasts are based on the best estimates of expected future revenues and costs, including the future cash costs of production, capital expenditure, close down and restoration. These may include net cash flows expected to be realized from extraction, processing and sale of mineral resources that do not currently qualify for inclusion in proven ore reserves. Such non reserve material is included where there is a high degree of confidence in its economic extraction. This expectation is usually based on preliminary drilling and sampling of areas of mineralization that are contiguous with existing reserves.

The mine plan takes account of all relevant characteristics of the ore body, ore grades, chemical and metallurgical properties of the ore impacting on process recoveries and capacities of processing equipment that can be used. The mine plan is therefore the basis for forecasting production output in each future year and for forecasting production costs.

The Corporation's cash flow forecasts are based on estimates of future commodity prices. These long term commodity prices, for most commodities, are derived from an analysis of the marginal costs of the producers of these commodities. These assessments often differ from current price levels and are updated periodically.

In some cases, prices applying to some part of the future sales volumes of a cash generating unit are predetermined by existing sales contracts. The effects of such contracts are taken into account in forecasting future cash flows.

There are numerous uncertainties inherent in estimating ore reserves, and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the forecast prices of commodity, exchange rates, production costs or recovery rates may change the economic status of reserves and may, ultimately, result in the reserves being restated.

Fair value of financial instruments

The Corporation's financial instruments primarily consist of cash, short-term money market investments, marketable securities, trade and other receivables, asset retirement funds, trade and other payables and accrued liabilities, loans to joint ventures, draw downs against credit facilities, other loans, uranium loans, and convertible debentures. The fair value of these financial instruments, except for the convertible debentures, approximates their carrying values, due primarily to their immediate or short-term maturity.

Fair values of other financial instruments have been estimated by reference to quoted market prices for actual or similar instruments where available and disclosed accordingly.

The valuation models maximize the use of observable market inputs however certain assumptions and estimates require management judgment including excess spread, prepayment rates, expected credit losses and discount rates. Valuation methodologies and assumptions are reviewed on an ongoing basis. A significant change in this assessment may result in unrealized losses being recognized in net income.

Fair value of stock-based compensation

The Corporation grants share-based awards, including restricted share rights and stock options, to certain directors and employees. For equity-settled awards, the fair value is charged to the consolidated income statement and credited to a related reserve account on a straight-line basis over the vesting period, after adjusting for the estimated number of awards that are expected to vest.

The fair value of the equity-settled awards is determined at the date of the grant. In calculating fair value, no account is taken of any vesting conditions, other than conditions linked to the price of the shares of the Corporation. The fair value is determined by using the Black-Scholes option pricing model.

Option pricing models require the input of highly subjective assumptions, including the expected price volatility. Changes in these assumptions can materially affect the fair value estimate and, therefore, the existing models do not necessarily provide a reliable measure of the fair value of the Corporation's stock options.

Fair value of assets and liabilities acquired in business combinations

Business combinations are accounted for by applying the acquisition method of accounting, whereby the purchase consideration of the combination is allocated to the identifiable net assets on the basis of fair value on acquisition. The amount of goodwill initially recognized is dependent on the allocation of the purchase price to the fair value of the identifiable assets acquired and the liabilities assumed. The determination of the fair value of the assets and liabilities is based, to a considerable extent, on management's judgment.

Allocation of the purchase price affects the results of the Corporation as finite lived intangible assets are amortized, whereas indefinite lived intangible assets, including goodwill, are not amortized and could result in differing amortization charges based on the allocation to indefinite lived and finite lived intangible assets.

Reclamation and closure cost obligations

Reclamation and closure cost obligation provisions represent management's best estimate of the present value of the future costs. Significant estimates and assumptions are made in determining the amount of reclamation and closure cost obligations provisions. Those estimates and assumptions deals with uncertainties such as: requirements of the relevant legal and regulatory framework; the magnitude of possible contamination; and the timing, extent and costs of required restoration and rehabilitation activity. These uncertainties may result in future actual expenditure differing from the amounts currently provided.

Taxation

The provision for income taxes and composition of income tax assets and liabilities requires management's judgment as to the types of arrangements considered to be a tax on income in contrast to an operating cost. Judgment is also required in assessing whether deferred tax assets and certain deferred tax liabilities are recognized in the balance sheet.

Assumptions about the generation of future taxable profits depend on management's estimates of future cash flows. These depend on estimates of future production and sales volumes, commodity prices, reserves, operating costs, and other capital management transactions. The application of income tax legislation also requires judgments. These judgments and assumptions are subject to risk and uncertainty, therefore there is a possibility that changes in circumstances will alter expectations, which may impact the amount of deferred tax assets and deferred tax liabilities recognized on the balance sheet and the amount of other tax losses and temporary differences not yet recognized.

INTERNATIONAL FINANCIAL REPORTING STANDARDS (“IFRS”)

Conversion plan

The Canadian Accounting Standards Board has mandated the adoption of IFRS for interim and annual financial statements for fiscal years beginning on or after January 1, 2011. The three months ended March 31, 2011 is the Corporation’s first reporting period under IFRS.

The Corporation implemented a multi-year transition plan comprising three major phases; a scoping, planning and assessment phase, a design and build phase and an implement and review phase culminating in the reporting of financial information in accordance with IFRS for Q1 2011.

The International Accounting Standards Board continues to amend and add to current IFRS standards. The Corporation’s conversion process includes monitoring actual and anticipated changes to IFRS standards and related rules and regulations and assessing the impacts of these changes on the Corporation and its reporting, including expected dates of when such impacts would be effective.

The Corporation has implemented the necessary changes to its systems and reporting processes including the implementation of new accounting and consolidation systems in various parts of its business in 2009, to support preparation of the IFRS opening balance sheet as at January 1, 2010 and the preparation of its financial statements under IFRS.

The impact of the transition to IFRS on internal controls over financial reporting and disclosure controls and procedures have been determined and the adjusted controls were implemented concurrently with the processing of the quantified differences on the opening balance sheet and during the preparation of the financial statements under IFRS.

The transition to IFRS did not have a significant impact the Corporation’s key performance indicators and compensation arrangements.

Impact of adoption of IFRS

The implementation of IFRS, and the policy choices made with the implementation, resulted in adjustments in equity, comprehensive income and presentation changes in the financial statements, which include reclassification changes.

The transition also resulted in numerous financial statement presentation changes, which resulted in more disclosure on certain notes.

The Corporation’s cash balances and cash flow statement have not been impacted, except for reclassification adjustments as illustrated in the interim financial statements.

The table below summarizes the adjustments to equity on the opening balance sheet and comparative periods, as disclosed in the interim financial statements:

	Jan 1, 2010	Jun 30, 2010	Dec 31, 2010
	US\$m	US\$m	US\$m
Under Canadian GAAP	1,480.9	1,617.0	2,336.4
IAS 36 - Impairment of assets	(269.8)	(267.6)	(210.8)
IAS 21 – Effects of Changes in Foreign Exchange rates	(135.8)	(123.0)	(122.1)
IAS 39 - Financial instruments	-	(32.5)	(2.3)
IFRS 1 – Business combinations	(54.9)	(53.4)	(71.0)
Under IFRS	1,020.4	1,140.5	1,930.2

The table below summarizes the adjustments to comprehensive income, as disclosed in the interim financial statements:

	Three months ended Jun 31, 2010 US\$m	Six months ended Jun 31, 2010 US\$m	Year ended Dec 31, 2010 US\$m
Comprehensive income under Canadian GAAP	(16.5)	(37.5)	(176.1)
Income statement adjustments:			
Exchange differences on translation	10.3	21.8	12.7
Impairment of mineral interest, property, plant and equipment	-	-	65.7
Fair value adjustment of financial liabilities	0.1	5.0	(8.9)
Fair value adjustment of embedded derivative	6.2	10.8	(26.5)
Unwinding of contingent liabilities	(1.7)	(3.4)	(7.0)
Other	0.2	1.0	-
	15.1	35.2	36.0
Other comprehensive income adjustments:			
Exchange differences on translation	(8.9)	(7.2)	(6.8)
Total IFRS conversion comprehensive income adjustments	6.2	28.0	29.2
Comprehensive income under IFRS	(10.3)	(9.5)	(146.9)

Post implementation

The post-implementation phase involve continuous monitoring of changes implemented by the International Accounting Standard Board ("IASB") to IFRS. There are significant ongoing projects which could impact the Corporation, including the proposed changes to the standards that govern the recognition and accounting for interest in joint ventures and the extractive industries project. The impact of any new standards or interpretations will be evaluated as they are drafted and published.

RISKS AND UNCERTAINTIES

The Corporation's operations and results are subject to various risks and uncertainties. These include, but are not limited to, the following: exploration and mining involves operational risks and hazards; mineral resources and mineral reserves are estimates only; there is no certainty that further exploration will result in new economically viable mining operations or yield new reserves to replace and expand current reserves; Uranium One cannot give any assurance that any of its development projects will become operating mines; or that any of its operations on care and maintenance will become operational; mineral rights and tenures may not be granted or renewed on satisfactory terms and may be revoked, altered or challenged by third parties; limited supply of desirable mineral lands for acquisition; risks and problems associated with completing and integrating acquisitions; competition in marketing uranium; competition from other sources of energy and public acceptance of nuclear energy; volatility and sensitivity to uranium prices; the capital requirements to complete the Corporation's current projects and expand its operations are substantial; the integration of acquisitions; currency fluctuations; potential conflicts of interest; the Corporation's operations and activities are subject to environmental risks; government regulation may adversely affect the Corporation; the risks of obtaining and maintaining necessary licences and permits; risks associated with foreign operations including, in relation to Kazakhstan, the risk of future sulphuric acid constraints and the Corporation is dependent on key personnel.

Uranium One's risk factors are discussed in detail in its Annual Information Form for the year ended December 31, 2010, which is available on SEDAR at www.sedar.com, and should be reviewed in conjunction with this document.

STOCK OPTION AND RESTRICTED SHARE PLANS

Under the Corporation's stock option plan, options granted are non-assignable and may be granted for a term not exceeding ten years. The aggregate maximum number of common shares available for issuance under the stock option plan may not exceed 7.2% of the common shares outstanding from time to time on a non-diluted basis and the aggregate maximum number of common shares available for issuance to non-employee directors under the plan may not exceed 1.0% of the total number of common shares outstanding on a non-diluted basis.

Under the Corporation's restricted share plan, restricted share rights exercisable for common shares of Uranium One at the end of a restricted period, for no additional consideration, are granted by the Board of Directors in its discretion to eligible directors, officers and employees. The aggregate maximum number of common shares available for issuance under the restricted share plan is capped at three million. The number of shares available for issuance to non-employee directors may not exceed 0.5% of the total number of common shares outstanding on a non-diluted basis.

There were no restricted share rights outstanding on December 31, 2010 or June 30, 2011.

During the six months ended June 30, 2011, stock options activity was as follows:

- 2,956,300 options were granted during the period.
- 5,000 options were exercised.
- 2,307,615 options were forfeited or expired.

DISCLOSURE CONTROLS AND PROCEDURES

The Corporation's management, with the participation of its Chief Executive Officer and Chief Financial Officer, are responsible for establishing and maintaining adequate disclosure controls. Disclosure controls and procedures are designed to provide reasonable assurance that all relevant information is gathered and reported on a timely basis to senior management, including Uranium One's Chief Executive Officer and Chief Financial Officer, so that appropriate decisions can be made regarding public disclosure, and information required to be disclosed is recorded, processed, summarized and reported within the time periods specified in securities legislation.

INTERNAL CONTROLS AND PROCEDURES

The Corporation's management, with the participation of its Chief Executive Officer and Chief Financial Officer, are responsible for establishing and maintaining adequate internal control over financial reporting. Under the supervision of the Chief Financial Officer, the Corporation's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with GAAP.

There have been no material changes in the Corporation's internal control over financial reporting during the quarter ended June 30, 2011 that have materially affected, or are reasonably likely to materially affect, the Corporation's internal control over financial reporting.

FORWARD-LOOKING STATEMENTS AND OTHER INFORMATION

This Management's Discussion and Analysis of Financial Condition and Results of Operations contains certain forward-looking statements. Forward-looking statements include but are not limited to those with respect to the price of uranium, the estimation of mineral resources and reserves, the realization of mineral reserve estimates, the timing and amount of estimated future production, the timing of uranium processing facilities being fully operational, costs of production, capital expenditures, costs and timing of the development of new deposits, success of exploration activities, permitting time lines, currency fluctuations, market conditions, corporate plans, objectives and goals, requirements for additional capital, government regulation of mining operations, the estimation of mineral resources and reserves, the realization of resource and reserve estimates, environmental risks, unanticipated reclamation expenses, the timing and potential effects of proposed acquisitions and divestitures, title disputes or claims and limitations on insurance coverage and the timing and possible outcome of pending litigation. In certain cases, forward-looking statements can be identified by the use of words such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or "believes" or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Corporation to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. Such risks and uncertainties include, among others, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, possible variations in grade and ore densities or recovery rates, failure of plant, equipment or processes to operate as anticipated, possible shortages of sulphuric acid in Kazakhstan, possible changes to the tax code in Kazakhstan, accidents, labour disputes or other risks of the mining industry, delays in obtaining government approvals or financing or in completion of development or construction activities, risks relating to the integration of acquisitions, to international operations, to prices of uranium as well as those factors referred to in the section entitled "Risk factors" in Uranium One's Annual Information Form for the year ended December 31, 2010 which is available on SEDAR at www.sedar.com, and which should be reviewed in conjunction with this document. Although Uranium One has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. Except as required under applicable securities laws, Uranium One undertakes no obligation to update publicly or revise any forward looking statements, whether as a result of new information, future events, or otherwise.

Readers are advised to refer to independent technical reports for detailed information on the Corporation's material properties. Those technical reports, which are available at www.sedar.com under Uranium One's profile, and also under the profiles of UrAsia Energy and Energy Metals Corp., provide the date of each resource or reserve estimate, details of the key assumptions, methods and parameters used in the estimates, details of quality and grade or quality of each resource or reserve and a general discussion of the extent to which the estimate may be materially affected by any known environmental, permitting, legal, taxation, socio-political, marketing, or other relevant issues. The technical reports also provide information with respect to data verification in the estimation.

This document and the Corporation's other publicly filed documents use the terms "measured", "indicated" and "inferred" resources as defined in accordance with National Instrument 43-101 - Standards of Disclosure for Mineral Projects. United States investors are advised that while these terms are recognized and required by Canadian regulations, the SEC does not recognize them. Investors are cautioned not to assume that all or any part of the mineral deposits in these categories will ever be converted into reserves. In addition, "inferred resources" have a great amount of uncertainty as to their existence and economic and legal feasibility and it cannot be assumed that all or any part of an inferred mineral resource will ever be upgraded to a higher category. Investors are cautioned not to assume that all or any part of an inferred resource exists or is economically or legally mineable. Mineral resources are not mineral reserves and do not have demonstrated economic viability.

Scientific and technical information contained herein has been reviewed on behalf of the Corporation by Mr. M.H.G. Heyns, Pr.Sci.Nat. (SACNASP), MSAIMM, MGSSA, Senior Vice President Technical Services of the Corporation, a qualified person for the purposes of NI 43-101.
